AUTHOR: Sikorski, Roman (Warsaw)

TITIE: A few problems on Boolean algebras

SOURCE: Polska Akademia Nauk. Instytut Matematyczny. Colloquium mathematicum, v. 11, no. 1, 1963, 25-28

TOPIC TAGS: Boolean algebra, search program, logic, computer logic

ABSTRACT: The article presents problems in Boolean algebra based on the author's preceding discussions (Colloquium Mathematicum 8 (1961), 1-13 and Boolean algebras, 2nd ed.). Problem 1. If a Boolean algebra $\hat{\mathbf{u}}$ is \mathbf{m}' -complete for every infinite cardinal $\mathbf{m}' < \mathbf{m}$, A, $A_{\ell} \in \mathcal{U}$, $A = \bigcup_{\ell \in \mathcal{I}} A_{\ell}$ and $T \leq \mathbf{m}$, then there exist elements $B_{\ell} \in \mathcal{U}$ ($\ell \in T$) such that

 $B_i \subset A_i$, $B_i \cap B_{i'} = 0$ for $i \neq i'$ and $A = \bigcup_{i \in I} B_i$.

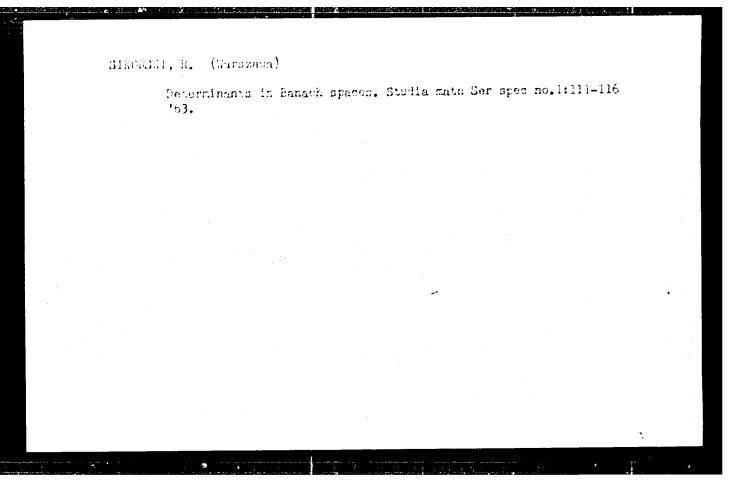

Is this theorem true without the hypothesis that $\mathfrak U$ is m'-complete for every $\mathfrak m' < \mathfrak m'$ Problem 2. Find, for every uncountable cardinal $\mathfrak m$, a Boolean ' $\mathfrak m$ -algebra $\mathfrak U$ with the property: if the join ' $\bigcup_{n \in A_i} A_i$ exists in $\mathfrak U$ and $T \leqslant \mathfrak m$, then there exists a finite subset $T \subset T$ such that $\bigcup_{n \in A_i} A_i$.

Proparation of polyacrylates of polyvalent metals and tests

TITLE:

on their application as desiccants

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 12, 1962, 605, abstract 12P220 (Tworzywa wielkocząsteczkowe, v. 6, no. 5, 1961,

TEXT: Optimum conditions for polymerization of acrylonitrile in a reducing medium (persulfate-pyrosulfate) are established; temperature of 50°C; time 2.5 hours; yield 79%. A mixture of 1 mole of polyacrylonitrile with 1.2 moles of NaOH in 600 ml of water is heated for 13 hours at 110°C until the colour has disappeared, neutralized with 0.5 N HCl to pH 8, 150 ml CH3OH added, filtered off, the precipitate washed with CH3OH until cl has been completely removed and a 95% yield of polyacrylic acid (I) is obtained. By varying the amount of NaOH, the temperature and the reaction time, yields of 85-96% of I are obtained. Tests were carried Card 1/2

Preparation of polyacrylates of ...

S/081/62/000/012/054/063 B158/B101

out on esterification of salts of I. A solution of 0.18 moles of K salt of I in 80 ml water and 0.18 moles of iso-C₃H₇Br are boiled for 8 hours, 200 ml of C₂H₅OH are added, the precipitate filtered off by suction, and washed with C₂H₅OH until Br has been removed; the ester yield is 34%. In the case of a 50% excess of iso-C₃H₇Br and reaction times of 15 and 23 nours, the ester yields are 57 and 83%, respectively. It is found that Co, Mn, Pb, and Al salts of I are insoluble. Co, Mn, and Pb salts of I when introduced into films of oil accelerate drying by 35%, while usual desiccants do so by 85%. Al salts give the films a dull hue. Abstracter's note: Complete translation.

TITLE .

Synthesis and properties of polyacrylic acid salts of

multivalent metals

PERIODICAL:

Plaste und Kautschuk, v. 8, no. 12, 1961, 591-593

TEXT: Esterification of Na-polyacrylate with i-propyloromide produces ester salts with a degree of esterification of 34% if the mol ratio of reagents amounts to 1:1 (reaction time 8 hrs). If the mol ratio amounts to 1:1.5 and the reaction time is 15 or 23 hrs, a degree of esterification of 57 or 84% is obtained. Salts of the polyacrylic acid with multivalent metals contain only approximately 10% of free carboxylic groups. Ester salts have mearly the same properties as analogous polyacrylates. Polyacrylates used as driers shorten the drying time of oil varnish only by 35%. Qualitative tests showed that Al-polyacrylate can be used as dulling agent. The authors conducted the examination in order to obtain the synthesis of some polyacrylic acid salts and to investigate their properties and possibilities of use. Conclusions: 1) If an aqueous solution of potassium polyacrylate reacts with i-propylbromide, a partial ester of the polyacrylic acid is obtained. The Card 1/2

311614 3/004/61/008/012/001/002 D029/D109

Synthesis and properties ...

degree of esterification depends on the mol ratio of the reagents and on the reaction time. 2) The obtained Co-, Mn-, Pb-, and Al-polyacrylates are insoluble and infusable, independent of the mol ratio polymer/metal. 3) Emulsions of such salts in oil varnishes speed up the drying process to a lesser extent than classical driers. 4) Salts of polyacrylic acid with multivalent metals or their partial esters can be used as catalysts or pigments. 5) Polymers chlorinated in presence of Al-polyacrylate catalyst have better properties (higher stability, no metal in the product) than polymers chlorinated in the presence of corresponding salts. Abstract

: In the measurements of the specific electric resistivity of Ge by the two-probe method, the results are considerably higher than the specific resistivity of pure Ge.

These anomalous values of the resistance depend on the voltage and an the direction of the current used in the measurements. It has been noted that this phenomenon is accompanied by the appearance of a volume photo-emf the behavior of which is connected with a character of the nonlinearity of the specific electric resistivity, and it

TOPIC TAGS: semiconductor, bulk photovoltaic effect, electric field, voltage distribution, potential distribution, linear lighting, spot lighting

ABSTRACT: This article contains equations, together with general and approximate solutions using the Green function and based on the integral equations theory, for the electric field of the bulk photovoltaic effect in semiconductors. The results are used for computing the distribution of the potential and voltage on the electrodes for cases of practical importance, as well as for computing the potential distribution in a rectangular plate of arbitrary thickness with linear lighting. Precise calculations show that known formulas and simplified assumptions can be used in making the necessary computations. The voltage computation on electrodes of a rectangular plate with spot lighting presents the most important results obtained from the calculations. Orig. art. has: 145 formulas and 25 figures.

Abstract

Methods of increasing the output of the brick and tile factories of the Polish Peoples Republic to 5-6 billion units without large capital investments are discussed. Among the methods discussed are the following: (a) modernization of natural drying areas by the large-scale application of portable ventilators and the utilization of the waste heat from the

furnaces; these improvements can extend the

s sharovidnym grafitom na stane 650)

Stal', 1958, Nr 8, pp 763 - 766 (USSR)

ABSTRACT: As the durability of the coupling sleeves of the mill 650 PERIODICAL:

made from grey iron decreased with increased degree of reduction per pass introduced in the rolling practice, the

use of sleeves made from nodular iron was investigated.

Four series of experimental smelting of magnesium-inoculated iron were carried out. Sleeves from the first series were tested as cast and of the remaining series after various heat treatments. The chemical composition, mechanical, and conditions of thermal treatment are given in Table 1. The microstructure of heat-treated metal - Figures 1-3, the mould for casting of sleeves - Figure 4, the results of service life of sleeves made from nodular

iron, grey iron and steel - Table 2. On the basis of the results obtained, it is concluded that the service life

Card1/2

Performance of the Coupling Sleeves Made from modular Iron at the Mill 650

of sleeves from nodular iron is 4-6 times ligher than that of sleeves made from grey iron. The optimum heat treatment is normalisation with subsequent annealing at 580 °C. Sleeves should be cast with the consumption of metal for shrinkage head not less than 20% of the weight of casting. When coupling sleeves are not heat-treated, then the sum of C + Si in nodular iron should be maintained in a range of 5.5-6.0%. There are 5 figures and 2 tables.

It was found that when rolling low-number girders, ABSTRACT:

especially Nr.20 in the reducing stand of a railstructural mill the metal often displaced the guides, leading to stoppages. The authors give details of guide construction and attachment (Fig.1) and also of special devices provided before each pass (Fig.2) to support the beam from below. This is advantageous for rolling large girders (Nr.30-55) but unreliable for smaller (Nr.18-16) sizes. For rolling these latter when the closed passes are in the bottom roll two variants of

guide arrangements have been proposed. In the first special movable vertical supports are provided for the

guides, fixed on trapezoidal projections.

Card 1/2

SOV/130-58-10-9/18 Improving Accessories on the Reducing Mill of a Heavy-Section Mill.

second a trapezoidal-section bar is fixed to the housing (similar to the guide bars on the finishing line) (Fig.4) which supports one end of the specially shaped guide, the other being held in the pass with the aid of a load. The authors favour the second variant and mention its applicabilities. Its adoption has enabled the load on the finishing line to be reduced by 20-25%. The new roll-pass designs used since March 1957 have led to better roll life, higher productivity and other improvements. The new accessories are especially useful for thin-walled sections, and during the year for which they have been in use no cases of guide displacement have occurred. There are 4 figures.

Protasov, N.F., Kalebnikov, V.P., Sikorskiy, A.I., Gonchar, V.V., Boldyrev, L.I. and Stefanov, V.Ye. AUTHORS:

Experience of the Adoption of Profiles for Mine Supports (Opyt osvoyeniya profiley dlya shekhtnogo krepleniya) TITLE:

Metallurg, 1958, Nr 12, pp 27 - 29 (USSR) ABSTRACT: The "Azovstal" works is one of the main suppliers of the more important sections for mine construction and opera-

tion. The authors illustrate (Fig 1) sections for props types 18A-18B and 28A-28B and show how the first two fit each other (Fig 2). These sections are rolled from 230 x 285 and 245 x 280 mm blooms in four stands arranged 230 x 200 and 247 x 200 mm blooms in lour stands arranged in two lines and the authors outline the pass design and deformations at the various stages. They deal with the production of inclined props to GOST-5157-53. The authors
